Mixed Project types

Type

Reference, Showcase

The Parisian Macau, known as Venetian Parcel 3 project, is SAnds China's fourth property at Cotai Strip Resorts Macau. The complex will have 3,000 hotel rooms, gaming space, a retail mall, replica Eiffel Tower, convention and exhibition halls, selections of international cuisine and entertainment. The project is expected to be complete in middle of 2015

TROX have supplied over 12000 units of VFL volume flow limiter to the installations at the end of 2014 and early of 2015. The units are used to provide accurate airflow rates as well as system balancing in order to minimise extensive commissioning activities and costs which would otherwise be required if traditional manually operated volume control dampers were used.

The winning of supply contract is a good example of team work from various TROX colleagues. TROX USA provided job references in the United States which helped to have relieved the US based end user's concern on the suitability of the equipment. TROX China carried out factory test to demonstrate the pressure independent characteristic performance of the units.
