

TFP

TFP Series Fan VAV Terminal Boxes take primary and induced air and mix the two thoroughly to provide a constant air supply to the occupied zone of the building.

Total flow from the diffuser is kept substantially constant thus giving very good air distribution even with high turn down of the primary air volume. TFP has been designed and developed to achieve lower room noise levels

Description

TFP Series Fan VAV Terminal Boxes take primary and induced air and mix the two thoroughly to provide a constant air supply to the occupied zone of the building.

Total flow from the diffuser is kept substantially constant thus giving very good air distribution even with high turn down of the primary air volume. TFP has been designed and developed to achieve lower room noise levels
